

Network Services

Supporting and Optimizing Your Network Solutions

HARDWARE

- Cisco Systems
- Juniper

NETWORK

- Dedicated Bandwidth
- Shared Bandwidth
- IP Transit
- Internet Exchange

OUR NETWORK SERVICES OFFERINGS

- Data Center Bandwidth
- Network Load Balancing
- Internet Access
- Managed Metro-Ethernet
- Managed IP VPN / MPLS
- Managed IPLC / Leased Line
- Managed Network Services
- Professional Services

STRENGTHS

- ISO 20000 certified Network Services
- Our network services are reliable and secure, offering up to 99.98% network uptime availability
- Multiple direct peer and upstream connectivity to international Tier-1 Telco
- Full autonomy & control of our network
- Customizable local and international route to cater to low latency application requirement
- Specially designed to provide best connectivity to APMEA countries
- We provide dedicated internet bandwidth with no aggregation or share with others
- Our load-balancing service ensures requests are routed to the server in the shortest space of time; thereby improving performance for their end-users and customers

BUSINESS CHALLENGES

The network is constantly changing with equipment being upgraded and /or re-configured. Decisions about data center consolidation and business reorganization also affect the network in different ways. In the current economic climate, there is a need to reduce capital expenditure, exploiting existing network infrastructure and minimizing the need to build new network. As demands for network resources increase, traditional network architecture is becoming less capable of meeting security, reliability and performance needs. In addition, quality of service improvement and fast response to network outages that reduces service downtime must also be taken into considerations.

OUR NETWORK SERVICES

Networks are an essential and integral part of any IT strategy which is as important as the systems and processes they support. Network speed and reliability are paramount, and FREENET network services are reliable and secure, offering 99.98% network uptime availability. From physical cabling to bandwidth provision, FREENET understands our customers' needs and resourcefully ensure the connection of customer's equipment to the outside world. FREENET provides network solutions and services that empower both large enterprises and growing companies to realize new business opportunities and improve service levels while reducing costs. Our 24 x 7 expert monitoring and management enables rapid issue resolution, improve security, and the flexibility to accommodate our clients evolving network

Data Center Bandwidth

FREENET currently provides customers with dedicated internet bandwidth of 128 kbps, 256 kbps, 512 kbps, 1 to 1000 Mbps within our data center premises for their internet connections. Our network connectivity is powered by reliable local and international Tier 1 upstream communication providers.

Network Load Balancing

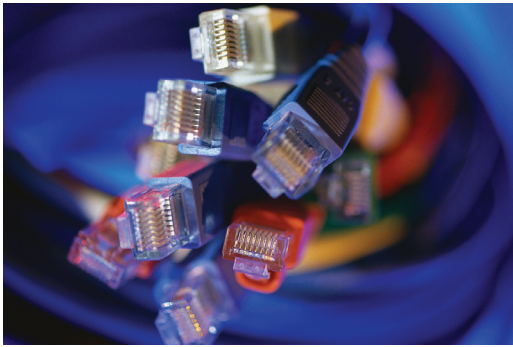

Our Load Balancing services give you the ability to provide traffic management and delivery optimization across servers located within a single hosting site or throughout remote sites, regardless of the platforms used. We provide load balancing service to customers and ensure requests are routed to the server in the shortest time possible, thereby improving performance for end users and customers.

Internet Access

FREENET provides a wide range of Internet access solutions for businesses of all sizes. From private DSL to Leased line and Metro Ethernet connections, we are certain you'll find a solution that meets your needs.

Managed Metro-Ethernet

It is commonly used as a network access to connect subscribers and businesses to a Wide Area Network, such as the Internet connecting from one building to another via LAN cable of 1Mbps to 1Gbps.

Managed IP VPN / MPLS

Your need for secured communications among locations grows along with your company. FREENET's IP VPN Solutions offer your business a secured connection to locations across the nation, all while keeping your current network protocols and ensuring privacy.

Multi-Protocol Label Switching (MPLS) is a part of a range of convergence solutions provided by FREENET that are simple, convenient and cost-effective, providing business with a fully managed end-to-end networking service across multiple sites. MPLS offers faster speed, flexible scalability and optimal traffic engineering.

Managed IPLC / Leased Line

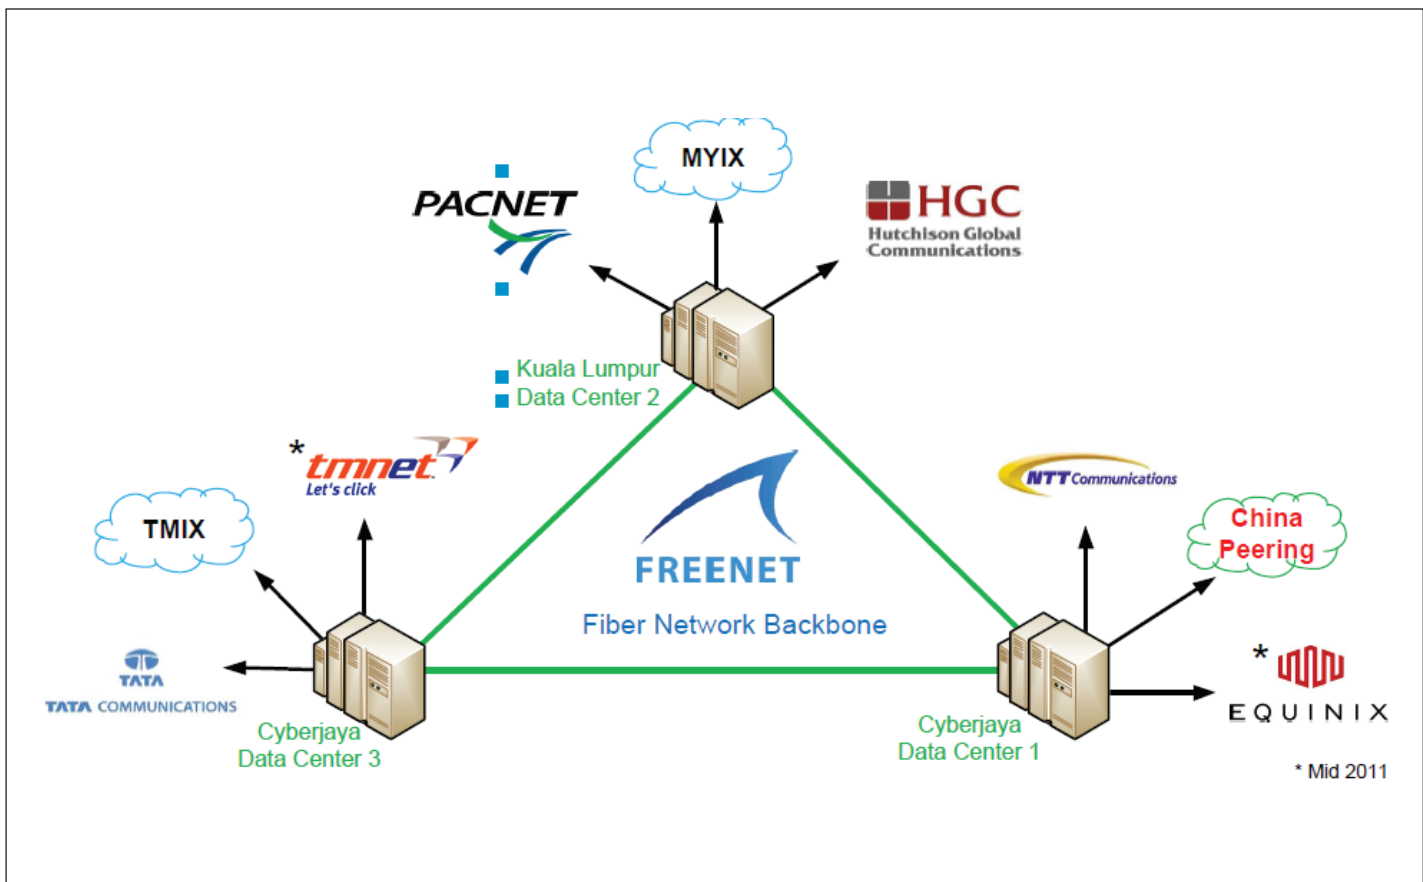

FREENET provides International Private Leased Circuit (IPLC), an internationally dedicated point-to-point leased line service between customers' premises around the world, which provides optimum platform for global private networks.

Other

Aside from the above Network Services, FREENET also offers:

- DR Seamless Failover Network
- Managed ISP
- Managed Global IP Routing

FREENET NETWORK DIAGRAM
